***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-3 and 5-7 are rejected under 35 U.S.C. 102(e) as being anticipated by Lin et al., U.S. patent # 6,340,734. Lin discloses silsesquioxane copolymers adhering to the structural parameters outlined in column 4, lines 52-67 through column 6, lines 1-10. Relevant to the present discussion, R<sup>1</sup> is an aromatic ring bonded to a silicon atom of the polymer framework by a C<sub>2</sub> or higher alkyl and preferably has an –OH group bonded thereto. Several embodiments of R<sup>2</sup> including a phenyl ring are contemplated in column 5. According to column 6, lines 5-7,  $n/(n + m)$  equals 0.05 to 1.0 so claim 6 is satisfied. As for column 7, column 7, lines 8-10, the weight-average molecular weight of the polymers is 1,500 to 100,000.

Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Tokutake et al., JP 4-130324. The first page of this document discloses a silsesquioxane copolymer comprising units having hydroxylbenzyl moieties and phenyl moieties where the former as a fraction of the total number of substituents is between 0.5 and 0.7.

### ***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-5 are rejected under the judicially created doctrine of double patenting over claims 1-4 of U. S. Patent No. 6,787,284 since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patent.

The subject matter claimed in the instant application is fully disclosed in the patent and is covered by the patent since the patent and the application are claiming common subject matter. In particular, component (C) of the composition taught by the reference exactly corresponds to the instantly claimed polymer. Claims 2, 3, and 4, limit component (C) in precisely the same fashion as do claims 2, 3, and 4 with respect to the polymer of claim 1.

Cited as being of interest is JP 2001-147538 which teaches a silsesquioxane copolymer featuring phenyl substituents and substituents that are silyl esters of

propanoic acid. Insofar as Applicant require that (a1) is devoid of acid-dissociable groups, this polymer does not anticipate the claimed invention.
